

YouLoad's large file delivery system eliminates the challenge often associated with sending and receiving large digital files. No more failed e-mail delivery messages. No more confusing FTP settings. No more software to purchase or install. YouLoad is designed to streamline the large file exchange process and provide a reliable and secure environment for your business.

YouLoad is easy to use, yet powerful and feature-rich for the most demanding users. Track downloads, confirm file receipts, manage authorized users, and much more. Find out why more and more businesses are choosing YouLoad and discover a new and better way to exchange large files over the Internet.

A Better Way to Transfer

Accountability and Reliability

Today, business moves fast and critical decisions are made quickly with the best available information. Until now, businesses would send files blindly assuming large, critical documents reached their intended recipient, only to find out later that the file never arrived. It doesn't make sense to risk customer confidence, revenue, and business relationships over failed e-mail delivery and lost files with no accountability for file exchange.

With YouLoad, your business can exchange large digital files with confidence and confirm receipt of every file sent to users. With YouLoad's Download Tracking and Historical Reporting, businesses can easily identify who received the file, from where, and when.

Anytime, Anywhere Access

A hosted web-based service, YouLoad is accessible from any Internet browser and is cross-platform compatible, which means YouLoad works great on both Windows and Mac.

With YouLoad, businesses can exchange large files from anywhere. No more specialized FTP programs, cryptic passwords, or random port settings to remember. Simply access the Load Control Panel using a personalized login and password and begin exchanging large files.

Administrative Access

For most businesses, exchanging large files extends beyond one user in the organization. With YouLoad, businesses can set up multiple Authorized Senders for large file delivery, add/remove users, set up e-mail notifications for uploaded files, and more. As part of the Load suite of services, YouLoad administrators can enable and manage user access through the Load Control Panel.

Brand Extension and Awareness

YouLoad gives businesses a decided branding advantage over most large file delivery programs. A fully customizable service, YouLoad can be used to extend the client brand with a brandable Upload Page, Download Page, and e-mail notifications. Drive customers to your website to upload files via the YouLoad Upload Page* and create a custom URL location that builds on your existing website address.

* Upload Page is only available to YouLoad Enterprise subscribers.
